List of all files for VLT/ANTU FORS1 ServiceMode programme 68.A-0617A

Listed are all ObservingBlocks, raw, reduced, and programme-specific calibration data files on the SM package (CD ROMs).

This log should help you find your data in an OB-related way. The columns have the following meaning:

OB_ID = ObservingBlock ID, either user-defined (4-5 digits) or redefined by Paranal Science Operations (9 digits)
OB_NAME = User-defined name of OB (max. 20 chars.)
TARGET = target name
RA, DEC = pointing coordinates (J2000)
Date = Civil date of observing night, used for organisation of your directory tree
raw file = archive file name of your raw file; to be found in <date>/raw/
D_CATG = content of fits keyword DPR CATG
D_TYPE = content of fits keyword DPR TYPE
D_TECH = content of fits keyword DPR TECH
reduced file = either archive file name of associated reduced file (in <date>/reduced/),
or comment if this is not available.

Notes to part I: Usually all IMG (1port and 4port mode) and LSS (1port only) science data are reduced. If no reduction has been performed, an attempt has been made to automatically classify reasons for this. However, there are non-trivial cases when no reduction could be performed ("unprocessed") which are not classified in detail. E.g., it could be that no suitable master calibrations were available at the time of processing.

Notes to part II: Only specific calibration data are listed here, i.e. those created specifically for your programme from OBs defined by you.

I. SCIENCE and associated TEST files for 68.A-0617A
