

Resolved Stellar Populations with EAGLE

Chris Evans (UKATC)

+ Yanbin Yang, Mathieu Puech, Matt Lehnert (GEPI);
Annette Ferguson, Mike Barker (Edinburgh);
Jean-Gabriel Cuby (LAM); Simon Morris (Durham)

DRM & DRSP Workshop – May 2009

Science & Technology Facilities Council
UK Astronomy Technology Centre

EAGLE Phase A study

- A multi-IFU, near-IR spectrometer for the E-ELT
- French-UK consortium
- PI: Jean-Gabriel Cuby (Marseille)
- 2 year study (09/07-09/09)
- Phase 1 review (07/08), Midterm review (02/09)

EAGLE Science

Science areas that drive the EAGLE requirements:

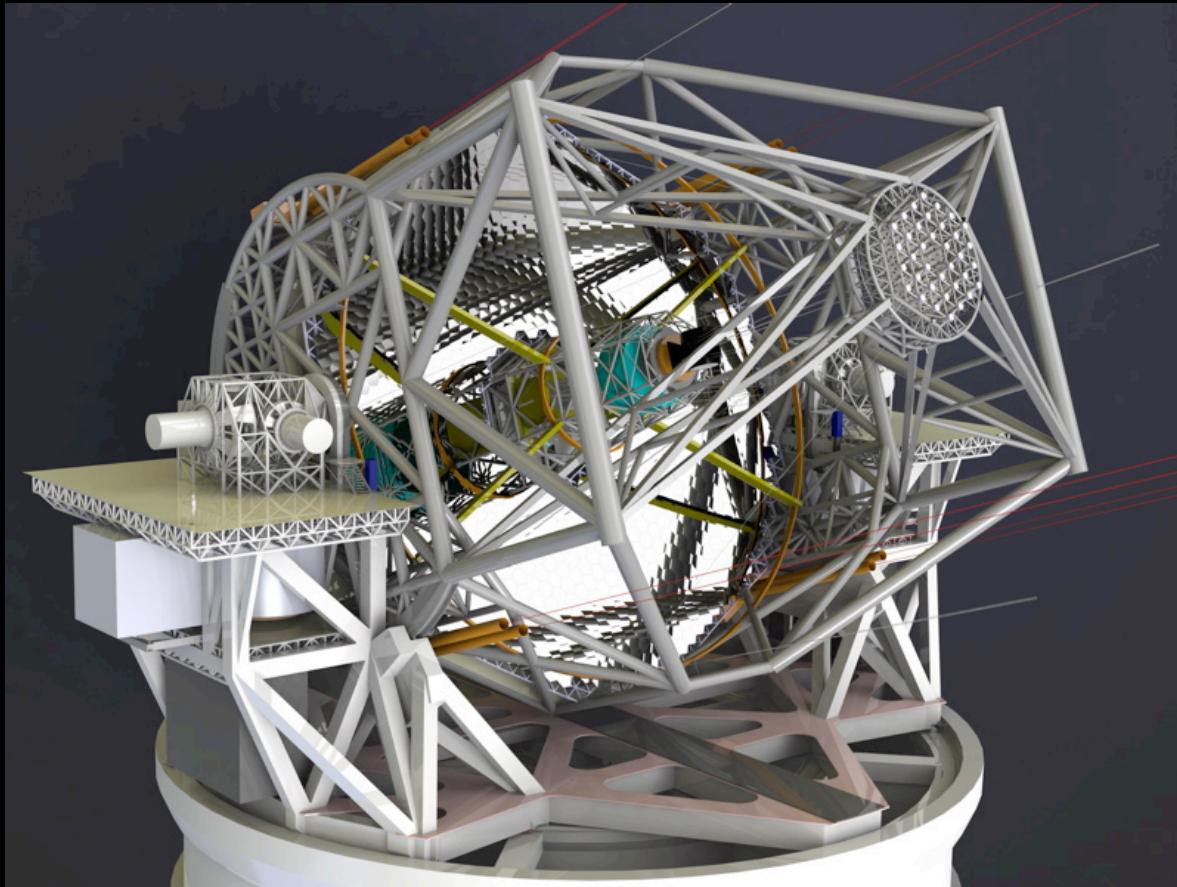

- Physics & evolution of high-z galaxies
 - See talk by Mathieu Puech
- Detection and characterisation of “first-light” galaxies
 - See talk by Jean-Gabriel Cuby
- Galaxy assembly/evolution from stellar archaeology
- Star-formation, stellar clusters and the IMF
- Co-ordinated growth of black holes and galaxies/AGN

EAGLE Baseline Design

Parameter	Specification
Patrol Field	5 arcmin (unobstructed) eqv. >7 arcmin (vignetted)
Science subfield (IFU FOV)	1.65 x 1.65 arcsec
Multiplex	20
Spatial Resolution	30% EE in 75mas (H-band)
Spectral resolving power	4,000 & 10,000
Wavelength range	0.8-2.5 μm

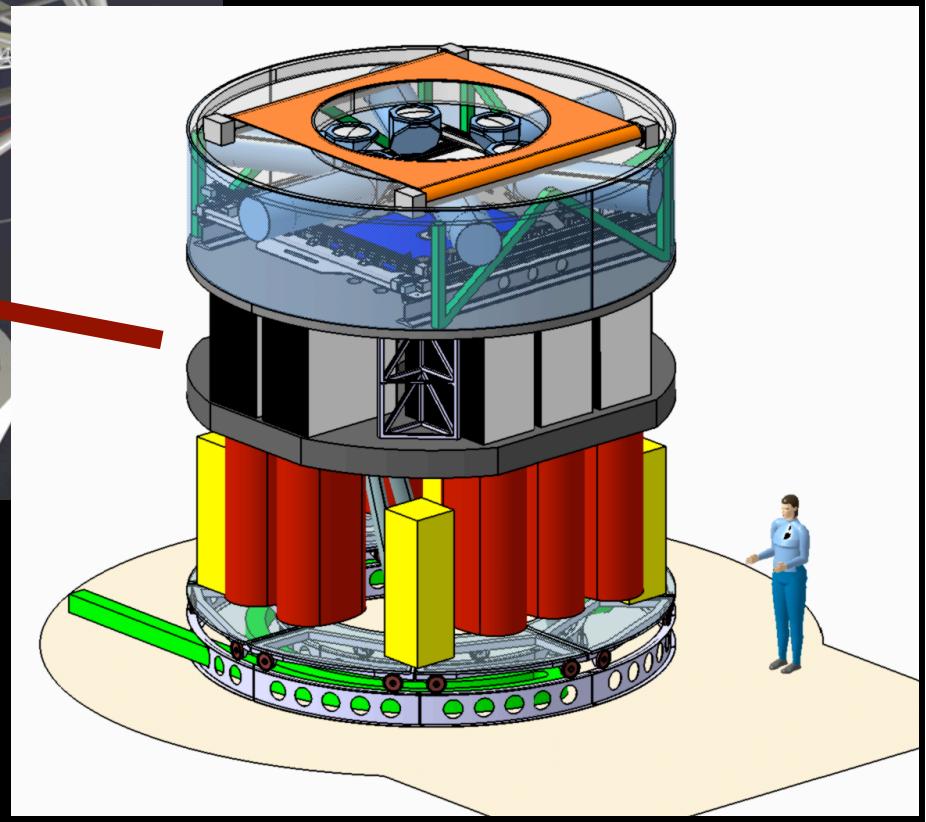

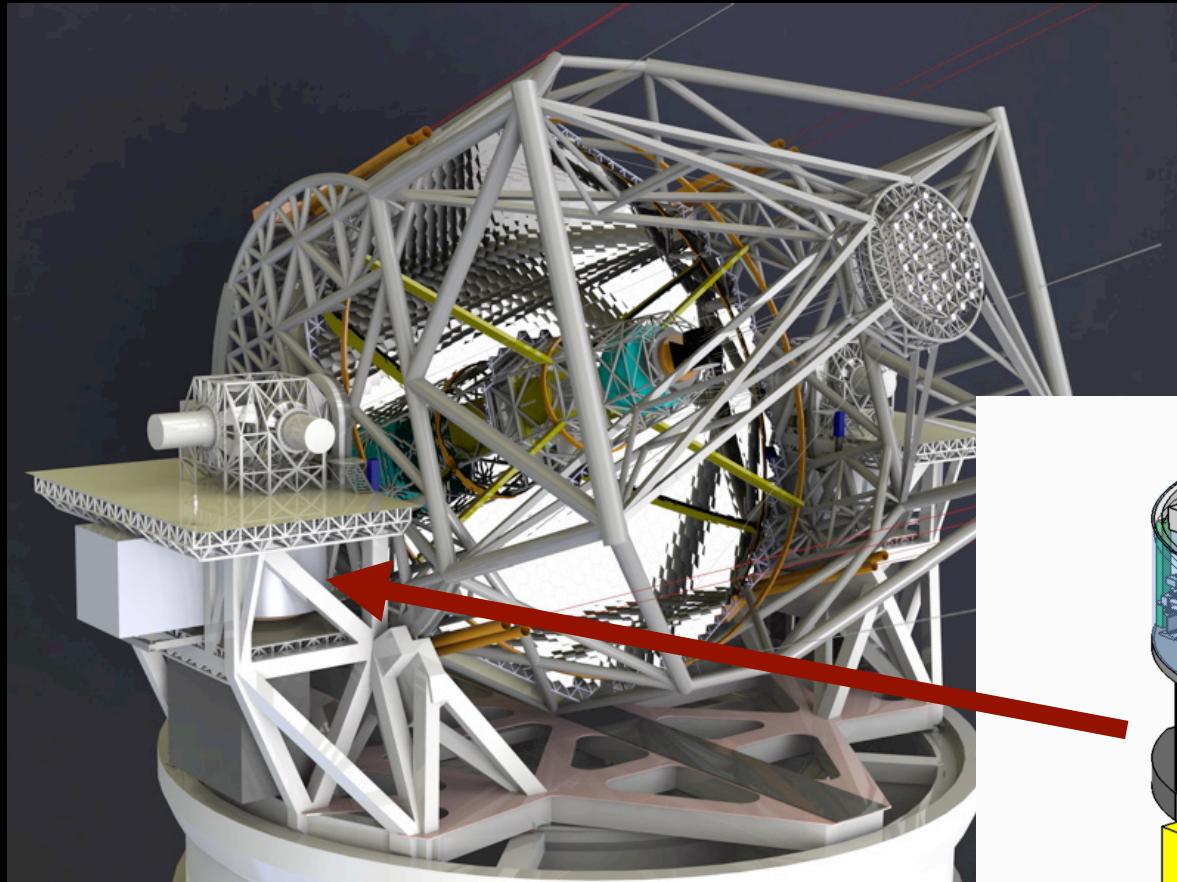

EAGLE Baseline Design

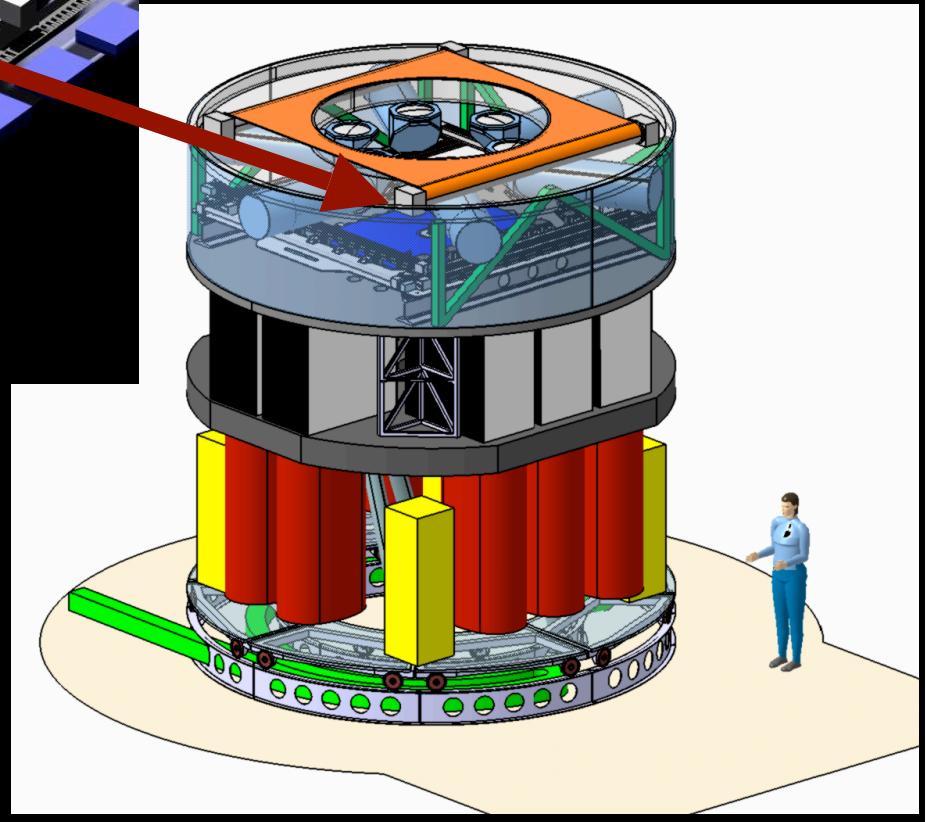

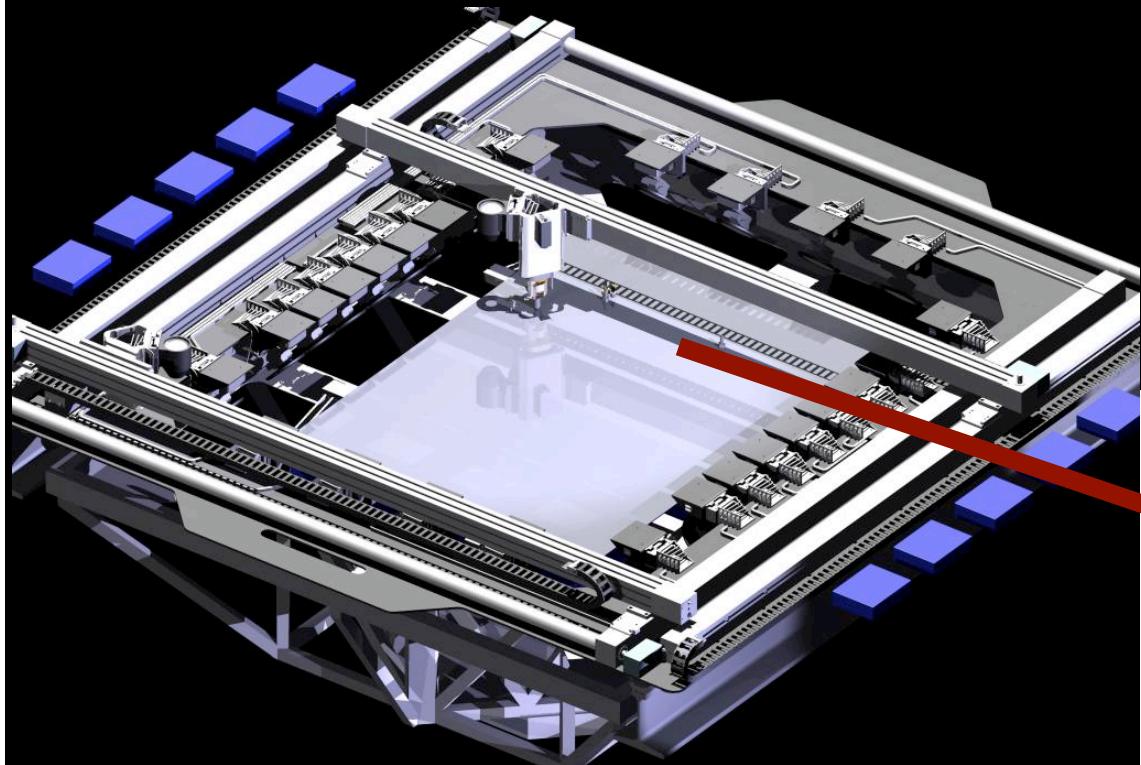

EAGLE Baseline Design

EAGLE AO

Multi-Object Adaptive Optics (MOAO)

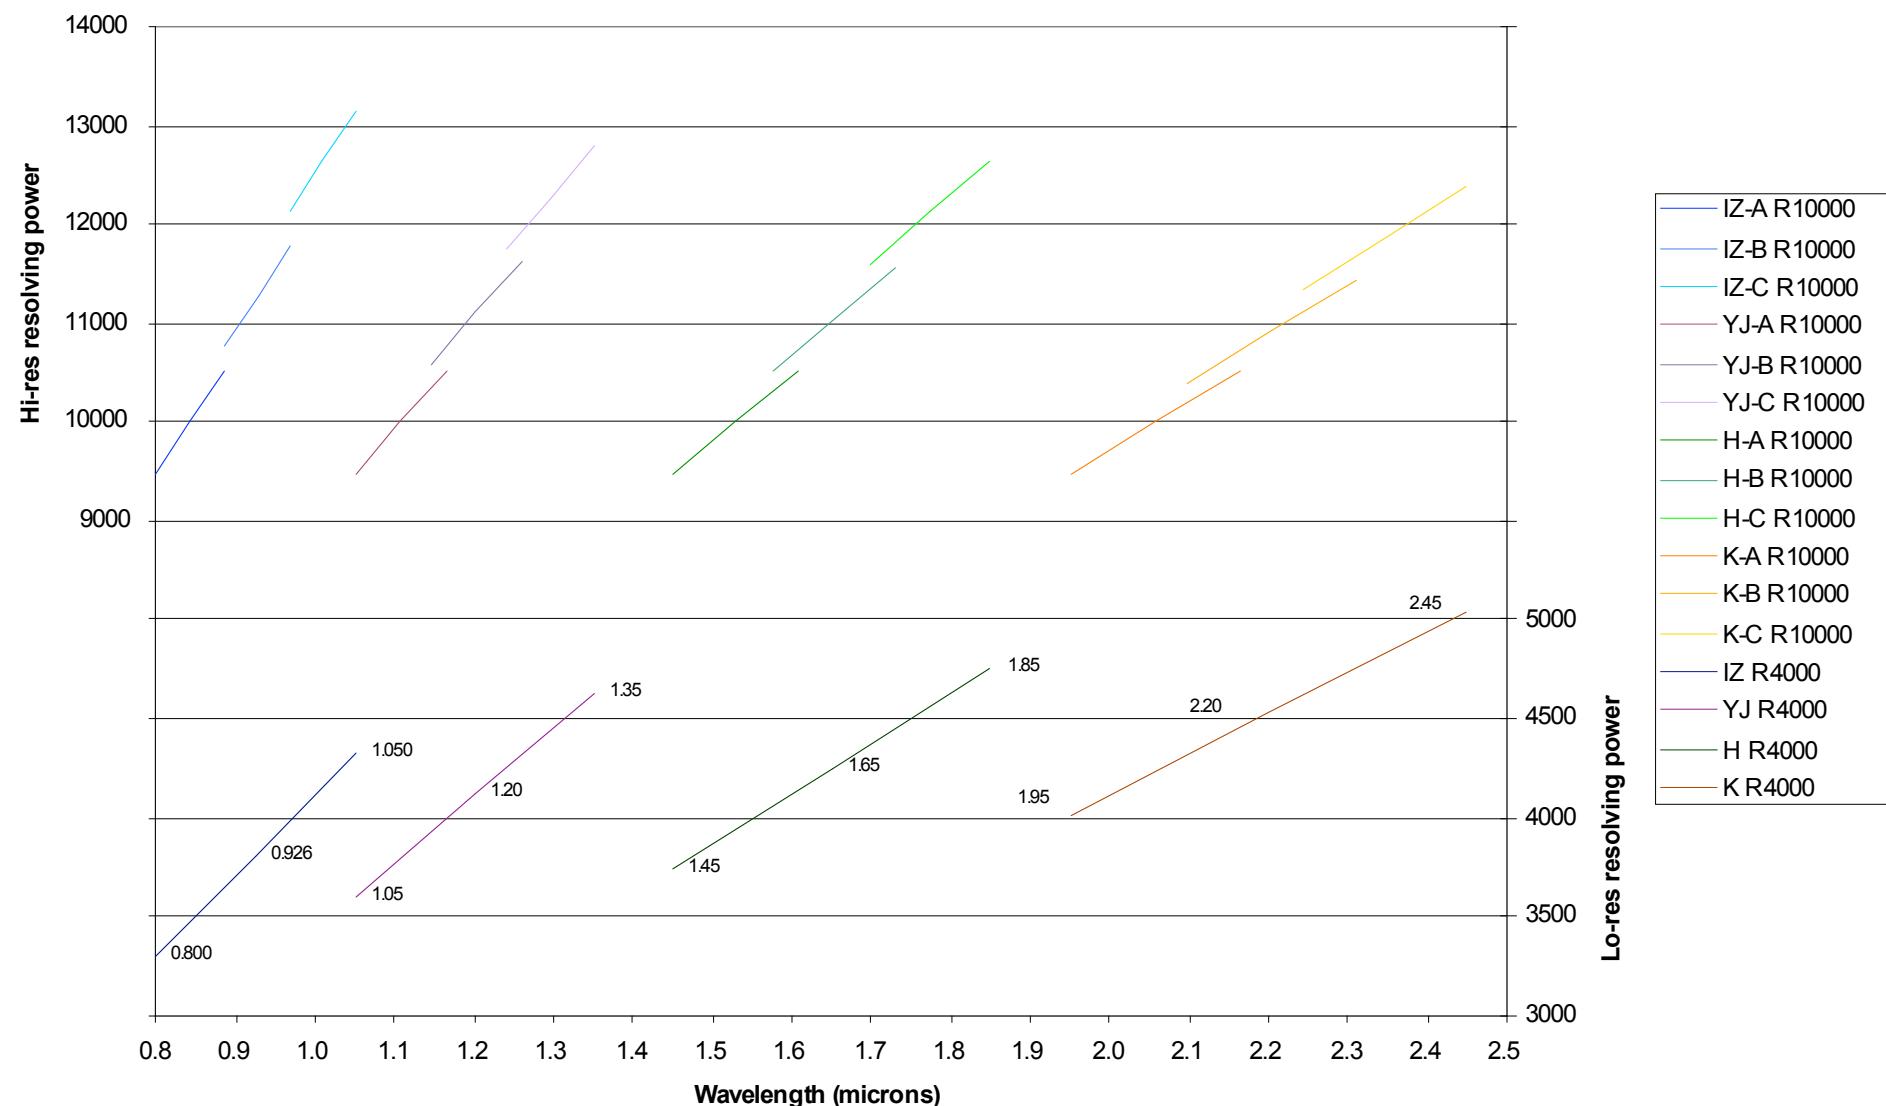

CANARY: 2010-2012:

- Demonstrate MOAO in EAGLE config.
- Improve real-time control techniques
- Develop calibration techniques

The ELT era

Resolved Stellar Populations in the Local Volume

E-ELT/EAGLE will unlock a huge range of new targets, including:

- NGC 3109 & Sextans A (1.3 Mpc)
- Spiral-dominated Sculptor Group (2-4 Mpc)
- M83/NGC5128 grouping (4-5 Mpc)
- NGC3379 (11 Mpc)
- Virgo Cluster galaxies (16-17 Mpc)

EAGLE DRSP

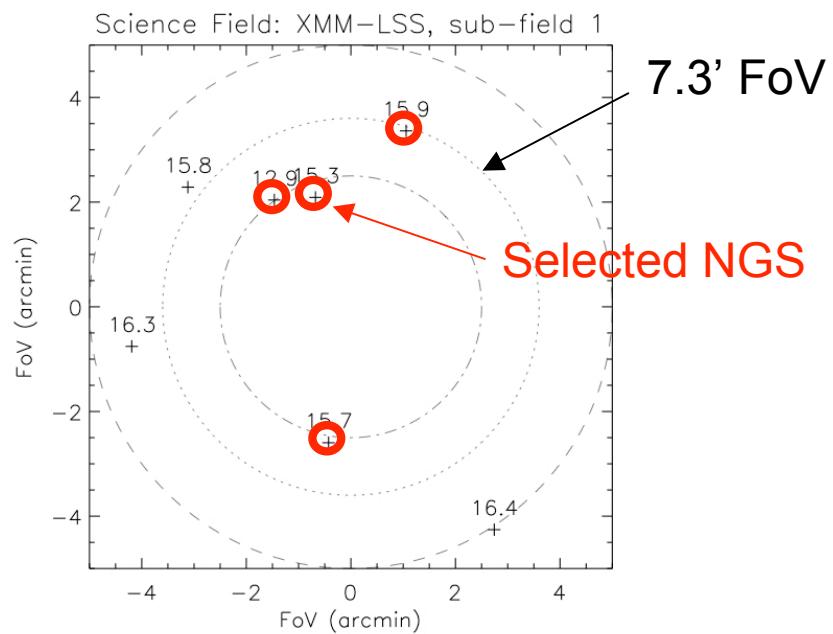

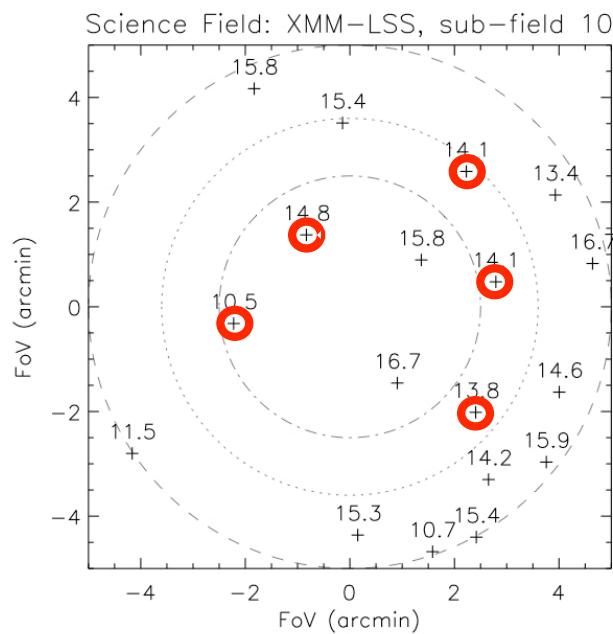

Formation & evolution of galaxies in the Sculptor “Group”

- Five spirals & numerous dwarfs
- Two distinct components:
 - NGC 55 & NGC 300 @ 1.9 Mpc
 - NGC 247, NGC 253 & NGC 7793 @3.6 Mpc
- Masses in the range $1.5\text{-}8 \times 10^8 M_{\text{sun}}$
- Excellent test for N-body/analytical models that struggle to reproduce the structure of late-type, lower mass spirals

MOAO performances

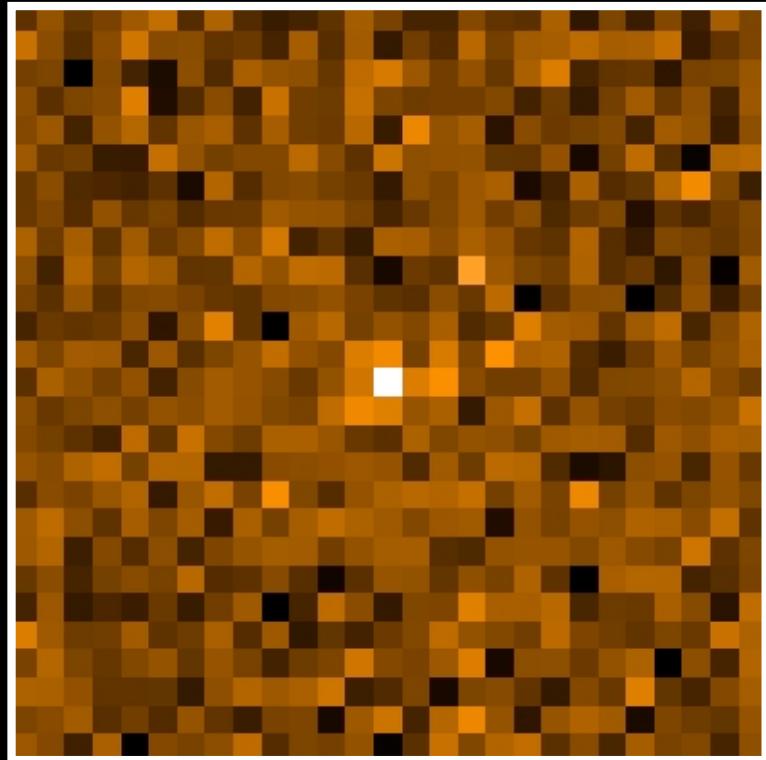

- MOAO PSFs from Francois Assemat et al. (ONERA)
- Seeing: 0.65" and 0.8"
- 84x84 DM; 2 x NGS configurations

EAGLE DRSP

Formation & evolution of galaxies in the Sculptor “Group”

- CaT spectroscopy of the upper RGB ($-4 < M_I < -2$)
- 10 hrs/pointing: NGC 55, NGC 300
- 15 hrs/pointing: NGC 247, NGC 253, NGC 7793
- x19 pointings: **>1,000 stars in 240 hrs**

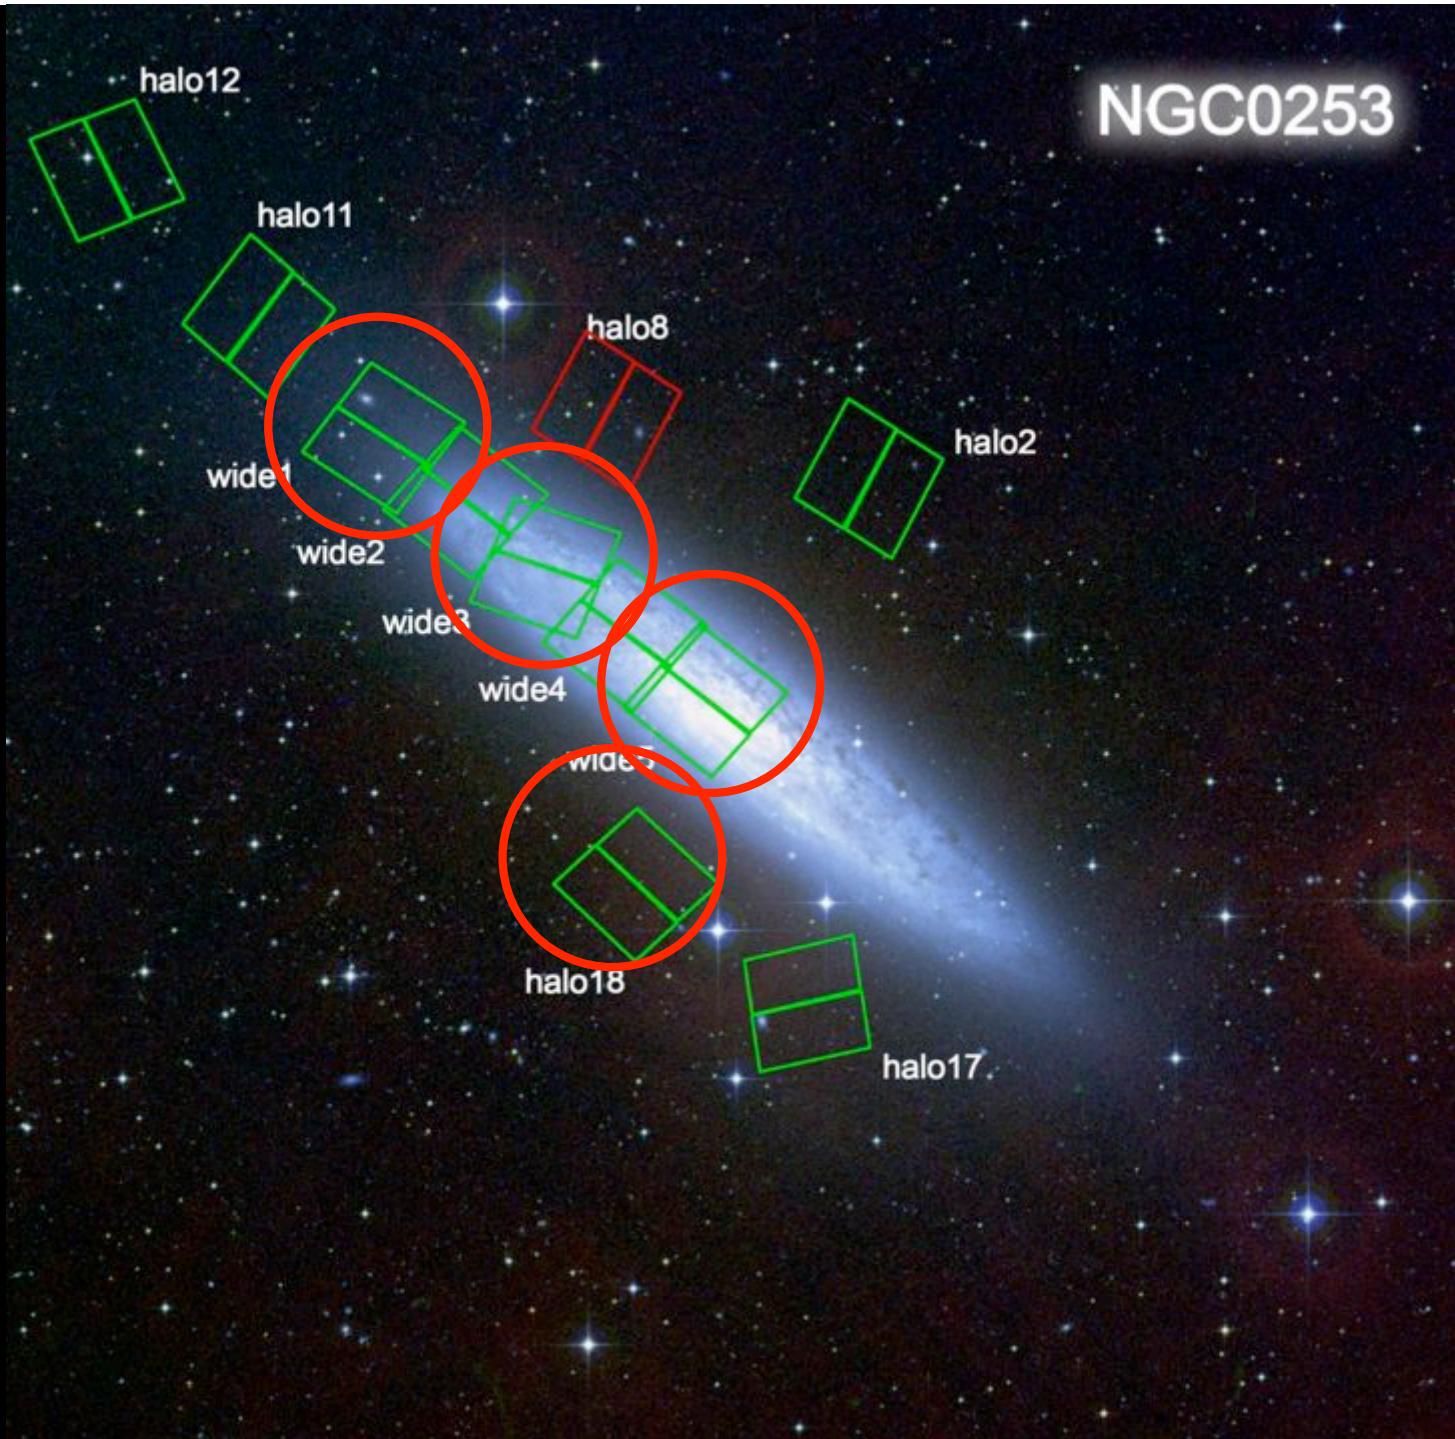

NGC0247

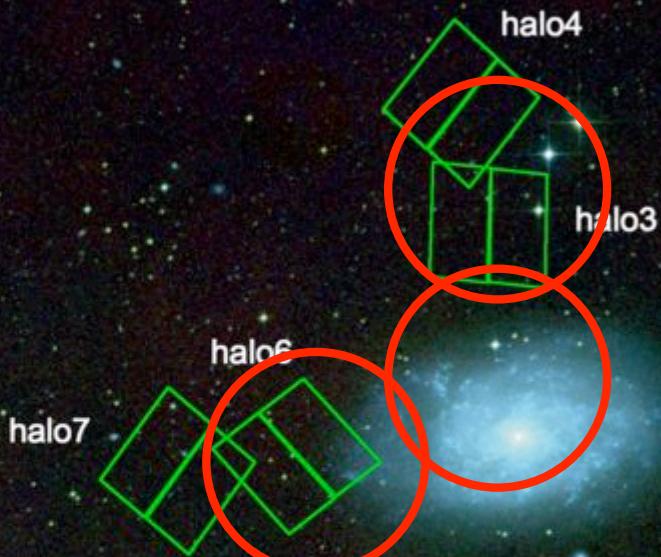

NGC0300

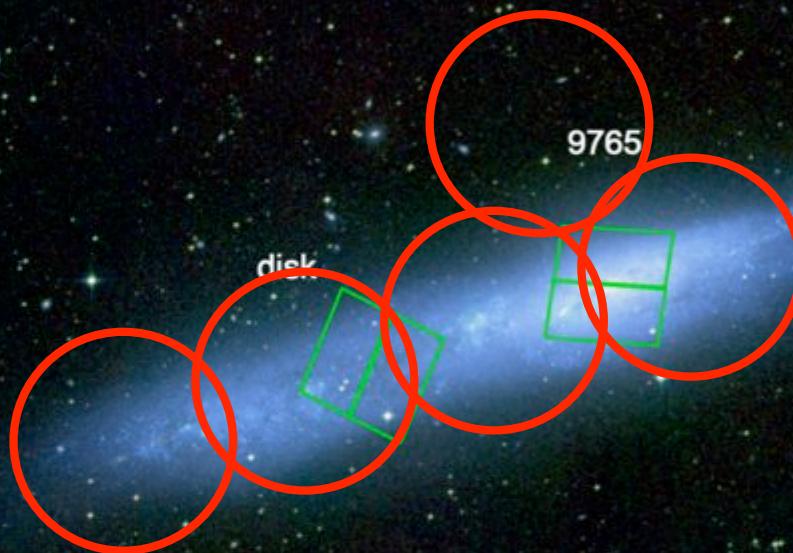

NGC0253

NGC7793

NGC0055

Summary

- R=10,000 CaT spectroscopy, S/N > 10 at I ~24.5 in 10 hrs
- Sculptor is just one conceivable “Large Programme”
- Multiple stars per IFU -> much larger effective multiplex
- Large patrol field enables efficient surveys
