

# A brief overview of VLT/VLTI instruments

Markus Wittkowski  
ESO User Support Department  
[mwittkow@eso.org](mailto:mwittkow@eso.org)

# Instruments available in Paranal

All VLT/I instruments are integrated into one operations scheme.  
P2PP3 is used for all instruments in principle in the same way.

# ESO Instruments Summary Table

[http://www.eso.org/sci/observing/phase2/sm\\_overview/instrument\\_summary.html](http://www.eso.org/sci/observing/phase2/sm_overview/instrument_summary.html)

Instrument	Spectral Coverage	Observing Mode	Spectral Resolution	Multiplex	Note	Telescope
FORS2	optical 330 - 1100 nm	imaging (incl. configurable occulting bars), long slit and multi-object spectroscopy, spectropolarimetry, imaging polarimetry	260 - 2600	yes	Spectroscopy with ~7" long slit, ~20" multi-slit, and laser-cut slit masks; high time resolution modes (imaging and spectroscopy) in visitor mode only; RRM	VLT UT1
CRIRES	IR 1-5 μm	echelle, slit spectroscopy	100,000	no	AO	VLT UT1
UVES	optical 300 - 1100 nm	echelle, image slicer, slit spectroscopy	up to 80,000 (blue arm) / 110,000 (red arm)	no	long slit capability in single order; iodine cell; RRM	VLT UT2
FLAMES	optical 370 - 950 nm	multi-fibre echelle,integral field spectroscopy	6000 - 47000	yes	135 Medusa fibres; 15 deployable IFUs, one large IFU; GIRAFFE: single echelle order; 8 fibres to UVES	VLT UT2
X-SHOOTER	UV-optical-NIR 300 - 2500 nm	echelle, slit and integral field spectroscopy	~5000-17000	no	full spectral coverage with one pointing; slit + IFU; RRM	VLT UT2
VIMOS	optical 360 - 1000 nm	imaging, multi-object spectroscopy, integral field spectroscopy	200-2500	yes	IFU size on sky from 13"x13" to 54"x54"; multi-object spectroscopy (MOS) with 4 laser-cut slit masks; Imaging and MOS field of view 4 times 7'x8'.	VLT UT3
ISAAC	IR 1-5 μm	imaging, spectroscopy, polarimetry, fast photometry	~250-10000	no	2.5'x2.5' field of view (1-5μm), 73"x73" (3-5μm) subwindow readout capability; RRM Expected to be decommissioned in 2012.	VLT UT3
VISIR	mid-IR	imaging spectroscopy	150-30 000	no	field of view selectable: 19"x19" to 32" x 32" after the upgrade the new FOV of	VLT UT3

# Instrument-specific P2PP items

- Documentation
- Observing templates
- Constraint set
- Calibration plan
- Waiver requests
- OB naming conventions
- Preparation tools
- Finding Chart requirements
- ReadMe file requirements
- Instrument Comments field  
in P2PP

# Instrument Comments field

## ■ HAWK-I, ISAAC

- IR magnitude of the brightest objects in the field

## ■ CRIRES, FLAMES, UVES, XSHOOTER

- Expected S/N and magnitudes

## ■ NACO, AMBER, MIDI

- Name of the associated calibrator or science OBs

# Constraint set

## ■ VLT/I instruments:

- Baseline configuration is a part of the constraint set
- Mandatory use of LST constraints

## ■ AO instruments:

- Atmospheric turbulence model needs to be set:
  - no-AO mode: no constraint
  - AO mode: default Paranal atmosphere model

## ■ MIR instruments (VISIR, CRIRES):

- PWV constraint needs to be set:
  - Conditions < 1mm are very rare
  - For the ranking of these OBs, PWV is used instead of sky transparency

## ■ Characteristics

- Optical
- Imaging, long slit and multi-object spectroscopy, spectro-polarimetry, imaging polarimetry

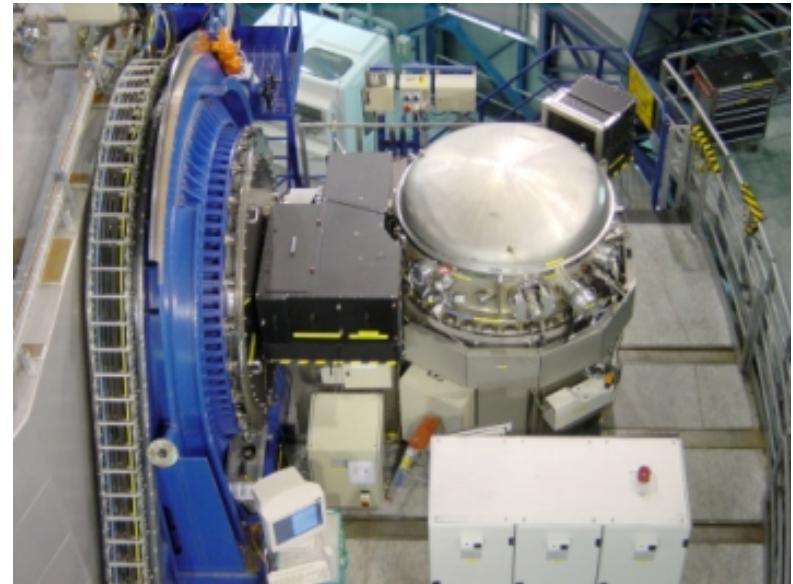

## ■ Tutorial

- Mario van den Ancker
- FIMS mask preparation

## ■ Characteristics

- IR (1-5  $\mu\text{m}$ )
- High-res. echelle, slit spectroscopy

## ■ Tutorial

- Elena Valenti

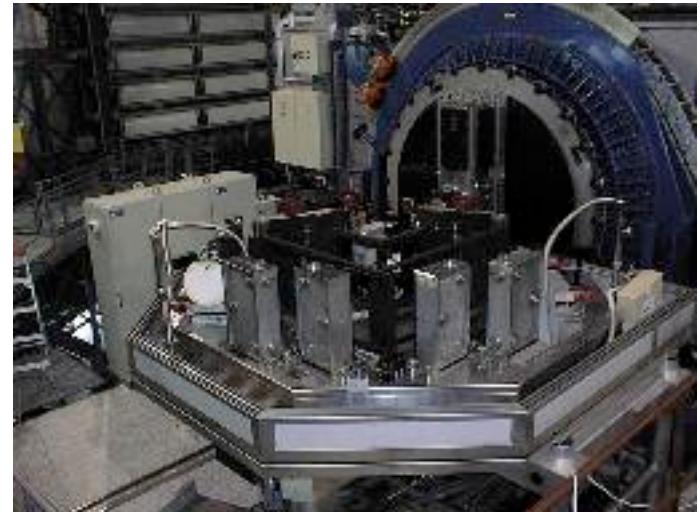

## ■ Characteristics

- Optical
- High-res. echelle, image slicer, slit spectroscopy

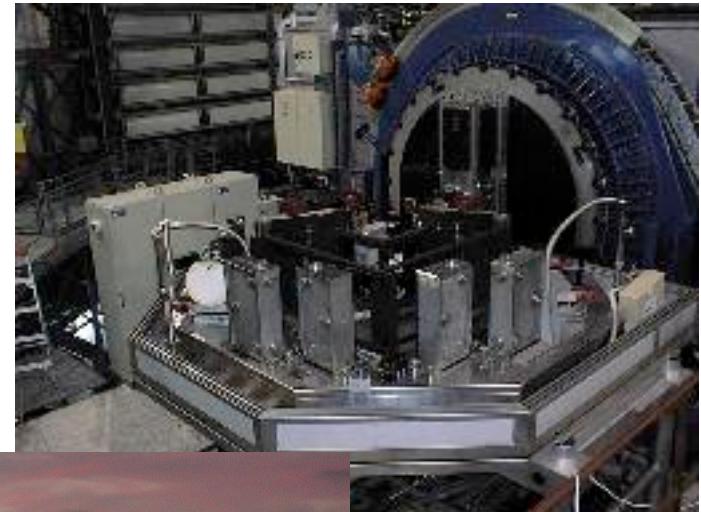

## ■ Tutorial

- Rodolfo Smiljanic
- Use of time link containers
- Use of concatenation containers

## ■ Characteristics

- Optical
- multi-fibre echelle,integral field spectroscopy

## ■ Tutorial

- Marina Rejkuba,  
Nadine Neumayer
- Preparation software FPOSS
- Use of group and time link  
containers

# X-Shooter @ UT2

## ■ Characteristics

- UV-optical-NIR
- echelle, slit and integral field spectroscopy

## ■ Tutorial

- Nadine Neumayer,  
Vincenzo Mainieri
- Concatenation containers
- Optimisation of exposure times  
in UVB, VIS, NIR arm
- Blind offsets for faint targets

## ■ Characteristics

- Optical
- imaging, multi-object spectroscopy, integral field spectroscopy

## ■ Tutorial

- Marina Rejkuba
- Preparation software Guidecam and VMMPS

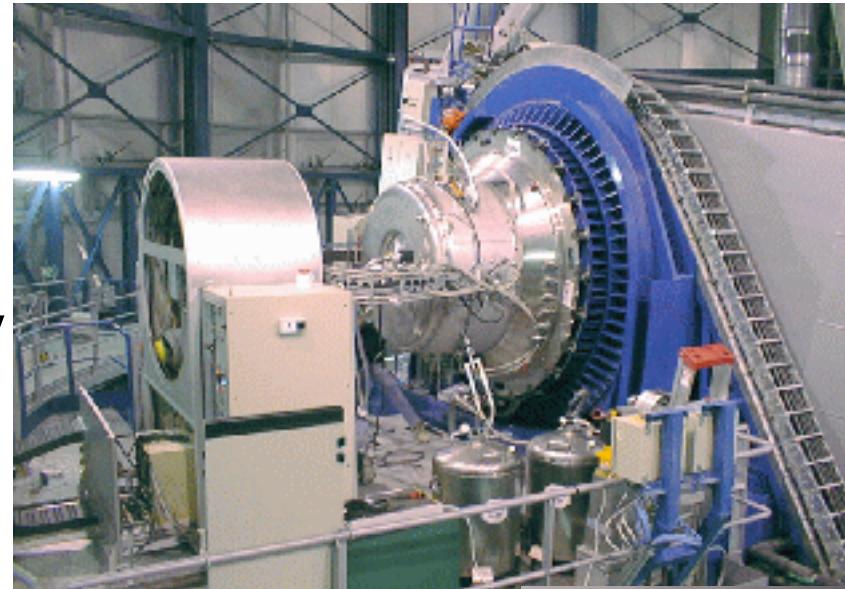

## ■ Characteristics

- IR (1-5  $\mu\text{m}$ )
- imaging, spectroscopy, polarimetry, fast photometry

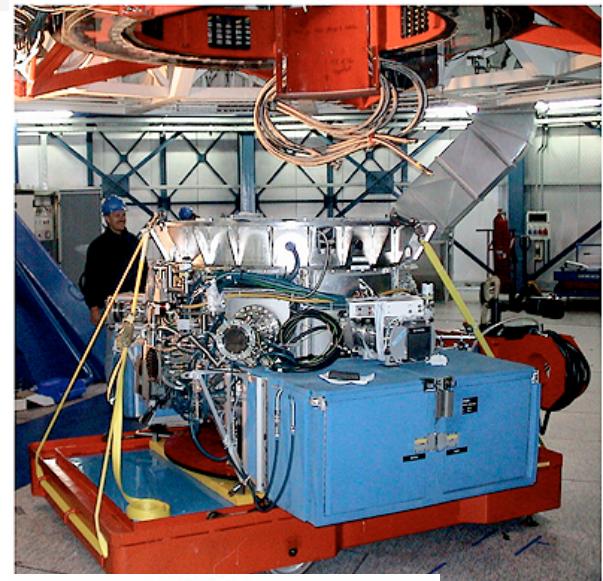

## ■ Tutorial

- Monika Petr-Gotzens,  
Markus Wittkowski
- preparation of highly time-critical fast phot observation

## ■ Characteristics

- mid-IR
- imaging, spectroscopy

Melipal Telescope

## ■ Tutorial

- Mario van den Ancker
- Observations with relative time links

## ■ Characteristics

- IR (1-4  $\mu\text{m}$ )
- imaging, imaging polarimetry, spectroscopy, coronography, sparse aperture masking,...

## ■ Tutorial

- Lowell Tacconi-Garman,  
Elena Valenti

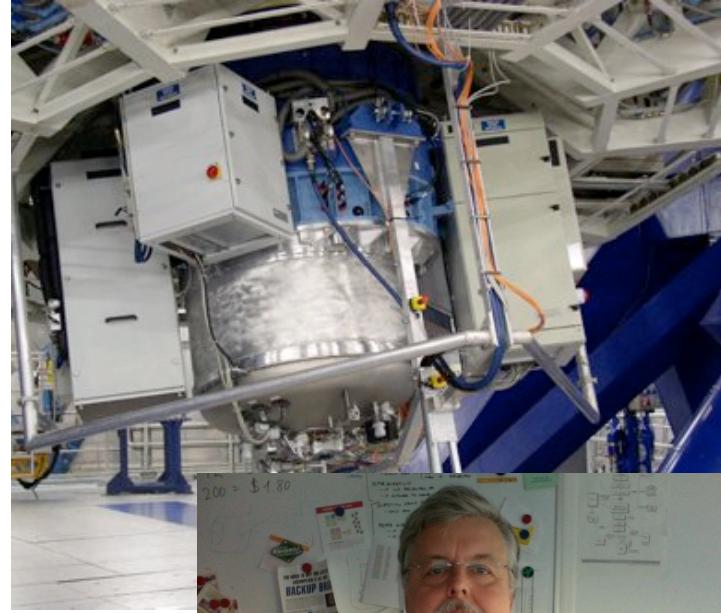

## ■ Characteristics

- Near-IR
- integral field spectroscopy

## ■ Tutorial

- Vincenzo Mainieri,  
Lowell Tacconi-Garman

## ■ Characteristics

- Near-IR
- imaging, fast photometry

## ■ Tutorial

- Elena Valenti

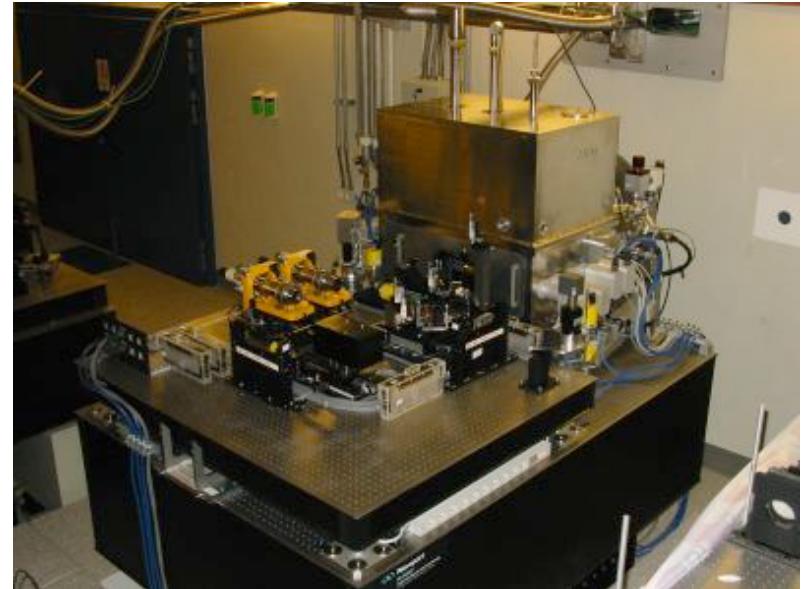

## ■ Characteristics

- MID-IR
- Spectro-interferometry

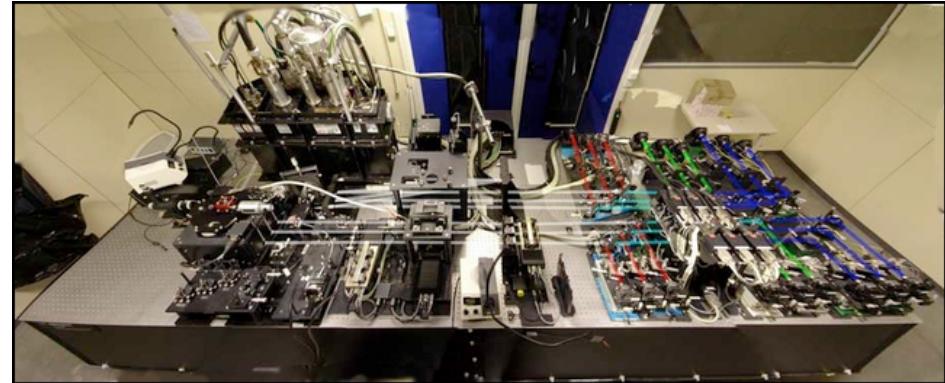

## ■ Tutorial

- Markus Wittkowski,  
Christian Hummel
- (Mandatory) use of CAL-SCI  
containers
- Local Sideral Time (LST)  
constraints
- Preparation tools VisCalc and  
CalVin

## ■ Characteristics

- Near-IR
- Spectro-interferometry

## ■ Tutorial

- Markus Wittkowski,  
Christian Hummel
- (Mandatory) use of CAL-SCI  
containers
- Local Sideral Time (LST)  
constraints
- Preparation tools VisCalc and  
CalVin

# OMEGACAM @ VST

## ■ Characteristics

- Optical (0.35 - 0.9 micron)
- wide-field imaging ( $1^\circ \times 1^\circ$ )

## ■ Tutorial

- Monika Petr-Gotzens

# VIRCAM @ VISTA

## ■ Characteristics

- Infrared
- Imaging

## ■ Tutorial

- Marina Rejkuba
