ESO, the European Southern Observatory, was created in 1962 to “… establish and operate an astronomical observatory in the southern hemisphere, equipped with powerful instruments, with the aim of furthering and organising collaboration in astronomy.” It is supported by nine countries: Belgium, Denmark, France, Germany, Italy, the Netherlands, Portugal, Sweden and Switzerland. ESO operates at two sites. It operates the La Silla observatory in the Atacama desert, 600 km north of Santiago de Chile, at 2,400 m altitude, where several optical telescopes with diameters up to 3.6 m and a 15-m submillimetre radio telescope (SEST) are now in operation. In addition, ESO is in the process of building the Very Large Telescope (VLT) on Paranal, a 2,600 m high mountain approximately 130 km south of Antofagasta, in the driest part of the Atacama desert. The VLT consists of four 8.2-metre and three 1.8-metre telescopes. These telescopes can also be used in combination as a giant interferometer (VLTI). The first two 8.2-metre telescopes (called ANTI and KUEYEN) are in regular operation, and the other two will follow soon. Over 1200 proposals are made each year for the use of the ESO telescopes. The ESO Headquarters are located in Garching, near Munich, Germany. This is the scientific, technical and administrative centre of ESO where technical development programmes are carried out to provide the La Silla and Paranal observatories with the most advanced instruments. There are also extensive astronomical data facilities. In Europe ESO employs about 200 international staff members. Fellows and Associates in Chile about 70 and, in addition, about 130 local staff members.

The ESO Messenger is published four times a year: normally in March, June, September and December. ESO also publishes Conference Proceedings, Preprints, Technical Notes and other material connected to its activities. Press Releases inform the media about particular events. For further information, contact the ESO Education and Public Relations Department at the following address:

The ESO Messenger:
Editor: Marie-Hélène Demoulin
Technical editor: Kurt Kjær

Printed by J. Gotteswinter GmbH
Buch- und Offsetdruck
Joseph-Döbling-Bogen 22
D-80807 München
Germany
ISSN 0722-6919

In addition to these volumes, copies are also available of ESO’S EARLY HISTORY – The European Southern Observatory from concept to reality. The author of this book is Prof. A. Blaauw, Director General of ESO from 1970–1974.

Contents

TELESCOPES AND INSTRUMENTATION

D. Queloz, M. Mayor et al.: From CORALIE to HARPS. The Way Towards 1 m s –1 Precision Doppler Measurements .......................... 1
R. Bender, G. Monnet and A. Renzini: Workshop on Scientific Drivers for Future VLT/VLTI Instrumentation – Summary and First Orientations .... 8
D. Silva: Service Mode Scheduling: A Primer for Users ....................... 18
Hunting the Southern Skies with SIMBA ........................................ 24

REPORTS FROM OBSERVERS

OTHER ASTRONOMICAL NEWS

D. Allion: ESO: Research Facilities in Santiago .................................. 42

ANNOUNCEMENTS

ESO-CERN-ESA Symposium “Astronomy, Cosmology and Fundamental Physics” ................................................................. 49
Vacancy Note: “A Challenge for Astronomers! Engineers in the field of Software, Electronics and/or Mechanics” ....................... 50
Personnel Movements .................................................................. 51
Scientific Preprints .................................................................. 51
ESO Publications Still Available .................................
