the variations suggest that this occurs near the star surface.

Discovery of a Low Mass B[e] Supergiant in the SMC
M. HEYDARI-MALAYERI, ESO

1. Introduction

Peculiar emission-line B supergiants are a group of early-type stars with the following typical characteristics: (a) strong Balmer emission lines frequently with P Cygni profiles, (b) permitted and forbidden lines of FeII, [FeII], [OII], etc. and (c) strong infrared excess possibly due to thermal radiation from circumstellar dust. They represent one of the two main groups of early-type emission line stars in the Magellanic Clouds.
