<sup>1)</sup> After a power failure or switching off the operating voltage the control path A → AB of the valve opens.

Δp<sub>max</sub> = maximum permissible differential pressure across the control path of the valve valid for the entire actuating range of the motorized valve

$\Delta p_s$  = maximum permissible differential pressure (close of pressure) at which the motorized valve will close securely against the pressure

## Sizing

### Example:

- 1  $\dot{V}_{100}$  = 0.083 l/s  
2  $\Delta p_{100}$  = 9 kPa  
3 Required  $k_{vs}$ -value = 1.0 m³/h

$\Delta p_{100}$  = differential pressure across the fully open valve and control path A → AB by a volume flow  $\dot{V}_{100}$   
 $\dot{V}_{100}$  = volume flow through the fully open valve ( $H_{100}$ )  
 $\Delta p_{max}$  = maximum permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve  
100 kPa = 1 bar ≈ 10 mWC  
1 m³/h = 0.278 l/s water at 20 °C

## Valve characteristics

With valve types VXP47../VMP47..(S), the  $k_{vs}$  values in bypass B represent only 70 % of the  $k_{vs}$  value in the straight-through control path, A → AB. This compensates for the flow resistance of the heat exchanger or radiator, so keeping the overall flow rate,  $\dot{V}_{100}$  as constant as possible.

- Combined disc / plug flow restrictor
- Seat ring embedded in through-port A → AB
- Seat machined into bypass B → AB.
- Continuously lubricated sealing rings
- Conical return springs, for more compact valve construction

## Engineering notes

Also refer to "Mounting notes" and "Commissioning", page 5.

The 2-port valves should preferably be installed in the return, where the stem seal will be exposed to lower temperatures.

**Recommendation:** A strainer should be fitted upstream of the valve. This increases reliability.

Valve construction	Valve series	Valve flow in control mode			Valve stem	
		Inlet A	Inlet B	Outlet AB	Retracted	Extended
<b>2-port valves</b> 	<b>VVP47..(S)</b> 	variable		variable	<b>A → AB</b> opens	<b>A → AB</b> closes
<b>3-port valves</b> 	<b>VXP47..</b> 	variable	variable	constant	<b>A → AB</b> opens  <b>B → AB</b> closes	<b>A → AB</b> closes  <b>B → AB</b> opens
<b>3-port valves with bypass</b> 	<b>VMP47.. (S)</b> 	variable	variable	constant	<b>A → AB</b> opens  <b>B → AB</b> closes	<b>A → AB</b> closes  <b>B → AB</b> opens

### Warning

The direction of flow **MUST** be as indicated by the arrow, i.e. only from A → AB and B → AB.  
 The 3-port valve types VXP47.. and VMP47..(S) may only be used in mixing applications.

## Mounting notes

### Orientation

The specified direction of flow must be observed in all cases, also refer to "Engineering notes", page 4.

The valves are delivered in single packs; Mounting Instructions 74 319 0301 0 are enclosed with the packaging.

The valve and actuator can be easily assembled on site. There is no need for special tools or calibration.

#### AL50 supporting ring

The AL50 supporting ring <sup>1)</sup> must be put into position before mounting the actuator SFP.. onto the valve. Only the equipment combination V..P47.. and SFP.. requires supporting ring AL50.

<sup>1)</sup> Included in delivery of the SFP.. actuator

## Commissioning

**Commission the valve only if the manual knob or actuator have been mounted correctly.**

#### Manual adjustment

The straight-through control path A → AB can be opened either electrically via the actuator, or by adjustment with the manual button. In the case of 3-port valves, this throttles or closes bypass B.

## Maintenance

### Warning

V..P47..(S) valves require no maintenance.

When doing service work on the valve / actuator:

- Deactivate the pump and turn off the power supply
- Close the shutoff valves
- Fully reduce the pressure in the piping system and allow pipes to completely cool down

If necessary, disconnect the electrical wires.

Before putting the valve into operation again, make certain the manual knob or the actuator is correctly fitted.

#### Stem sealing gland

The stem sealing gland cannot be exchanged. In the case of leakage, the entire valve must be replaced. Contact your local office or branch.

#### Disposal

Do not dispose of the device as household waste.

### **Warning**

Due to the tensioned spring return, valve disassembly may result in flying parts causing possible injury.

Only authorized staff may disassemble valves with tensioned spring return!

### **Disposal**

- Special handling of individual components may be mandated by law or make ecological sense.
- Observe all local and currently applicable laws and regulations.

The technical data supplied for these valves is valid only for valves used in conjunction with the actuators listed under "Equipment combinations", page 2.

**Use with third-party actuators invalidates any warranty offered by Siemens Switzerland Ltd / HVAC Products.**
