Document Conventions

You will see several different colors of text used in this document. These were chosen to help the reader differentiate between the following types of parameter sources:

GREEN_ENTRIES – come from the process resource file for a particular pipeline process
ORANGE_ENTRIES – come from entries in the OTFR request and response files
TAN_ENTRIES – come from the OPUS_DEFINITIONS_DIR:opus_login.csh login script
RED_ENTRIES – come from the OPUS blackboard system

Hopefully the use of these different colors will make the source of each parameter more clear.

Overview
