

Attention:

* Space for additional boards is available within the WFS Camera housing. If this possibility is used, the boards must stay within the dimensions indicated in VLT-ESO-14850-0-131000-0009. Details about connectors between the boards and fixation of the additional boards to the NGC main board must be defined by the NGC team. Areas to place distance holders for the boards are marked in the drawing.

- The position of the fiber trancievers mounted to the NGC main board must allow the routing of the fibers to the fiber feedthrough located in the connector plate.
