Cosmic Collisions

In this book, we will give a brief and up-to-date introduction to the lives of galaxies — how they were born, evolve over time, and collide — using the best pictures taken by the Hubble Space Telescope. Many of these images are from a huge investigation of luminous infrared galaxies called the GOALS project (Great Observatory All-sky LIRG Survey, goals.ipac.caltech.edu). The Hubble observations were led by Aaron S. Evans from Stony Brook University (U.S.).

The Hands-On Guide for Science Communicators

Many people know something about communication – it is after all an innate human ability – but a full comprehension of how to do science communication effectively is not acquired easily. This Guide touches upon all aspects of science communication, revealing a tightly interwoven fabric of issues: product types, target groups, written communication, visual communication, validation processes, practices of efficient workflow, distribution, promotion, advertising and much more. New science communicators will find this Guide both helpful and inspirational.

ESO's Early History Book

This book, written by Professor Adriaan Blaauw (ESO Director General 1970 - 1974), tells the early story of ESO. It begins in the early 1950's when leading European astronomers initiated the project and started a search for the best possible site under the comparatively unexplored southern sky. It describes the development of ESO up to about 1975.

ESO - Awesome Universe exhibition catalogue

This is the catalogue for "Awesome Universe — the Cosmos through the eyes of the European Southern Observatory" — a series of public exhibitions celebrating 50 years of Europe's quest to explore the southern sky. It is presented internationally, in cooperation with ESO's partners in Europe and around the world. Visitors to Awesome Universe exhibitions will discover these visually stunning images, showcasing celestial objects such as galaxies, nebulae, and star clusters as seen by ESO's observatories, as well as beautiful images of the observatories themselves, which are located in some of the most unusual places on Earth.

Brochures

ES Architecture Brochure

The novel design of the ESO Supernova Planetarium & Visitor Centre building resembles that of a close double-star system with one star transferring mass to its companion. This set-up will ultimately lead to the heavier component exploding as a supernova, briefly becoming as bright as the light of all the stars in the Milky Way combined. The ESO Supernova was designed by the architects Bernhardt + Partner and in this brochure you can find out more details about the stunning architectural concept used for our centre.

Hubble 15 Years of Discovery DVD VIP v.3 - Box

VIP Box version. ESA's anniversary DVD film "Hubble - 15 years of discovery" covers all aspects of the Hubble Space Telescope project – a journey through the history, the troubled early life and the ultimate scientific successes of Hubble. This portrait, directed by Lars Lindberg Christensen, contains large amounts of previously unpublished footage of superb quality. With more than 700,000 copies distributed, this DVD movie is probably the most widely available science documentary ever. Hubble's spectacular visual images make a stunning backdrop throughout the film, bringing an immediacy and vitality as the narrative reveals the new insights Hubble has inspired in all fields of astronomy from exoplanets to black holes. Complex though the science behind the telescope's images often is, Art Director Martin Kornmesser has developed a unique style of elaborate 3D animation that enhances and vividly clarifies the underlying science. The movie is presented by an ESA scientist, Dr. Robert (Bob) Fosbury, who has himself used Hubble for his own research on many occasions.

Europe to the Stars - ESO's first 50 years of Exploring the Southern Sky - Bluray

To celebrate its 50th anniversary, ESO released the documentary Europe to the Stars — ESO's first 50 years of exploring the southern sky. The movie captures the story of ESO's epic adventure — a story of cosmic curiosity, courage and perseverance. The story of discovering a Universe of deep mysteries and hidden secrets. The story of designing, building and operating the most powerful ground-based telescopes on the planet.

The movie consists of eight chapters, each focusing on one essential aspect of an observatory, setting each in perspective and offering a broader view on how astronomy is done; from site-testing and explaining the best conditions for observing the sky to how telescopes are built and the mysteries of the Universe that astronomers are revealing.

With a total duration of 61 minutes, the movie is in full HD (1080p) and is available on Blu-ray or DVD. It has a comprehensive bonus section, narration and subtitles in several language(s).

Mounted Images

Our mounted images are produced by specialists and the images are printed on photographic paper of impeccable exhibition quality.

The photograph is mounted permanently onto an aluminum plate which at the same time forms the “back board” and contains the wall-hanging fixture. The result is a very clear, open and immediate presentation of the photograph.

Mounting on aluminium Dibond (Lumabond)

With this process the photograph is mounted onto an aluminum bonding plate (“Dibond”) of the same size.

The special glue creates a permanent bond and a completely consistent impression. A UV-protective film is then applied, ensuring that the work is protected from any damage.

With the addition of hooks and spacers on the back, the photograph is ready to be hung.

La Silla Observatory at sunset with a rare cloudscape

The setting sun lights the sky afire with crimson clouds. The telescopes of ESO's La Silla Observatory in Chile reflect the splendour above.

4 260576 724397

Gegenschein over the VLT

At Paranal, home of ESO's Very Large Telescope, the sky is so dark that the famous — and extremely difficult to observe — Gegenschein (or “counter shine”) can be seen here in its full glory. This is a faint brightening of the night sky in the region directly opposite the Sun, caused by the reflection of sunlight by interplanetary dust in the Solar System.

Spiral Galaxy Messier 83

This dramatic image of the galaxy Messier 83 was captured by the Wide Field Imager at ESO's La Silla Observatory, located high in the dry desert mountains of the Chilean Atacama Desert. Messier 83 lies roughly 15 million light-years away towards the huge southern constellation of Hydra (the sea serpent). It stretches over 40 000 light-years, making it roughly 2.5 times smaller than our own Milky Way. However, in some respects, Messier 83 is quite similar to our own galaxy. Both the Milky Way and Messier 83 possess a bar across their galactic nucleus, the dense spherical conglomeration of stars seen at the centre of the galaxies.

4 260576 724625

The Globular Cluster
Omega Centauri

The globular cluster Omega Centauri — with as many as ten million stars — is seen in all its splendour in this image captured with the WFI camera from ESO's La Silla Observatory. The image shows only the central part of the cluster — about the size of the full moon on the sky (half a degree). North is up, East is to the left. This colour image is a composite of B, V and I filtered images. Note that because WFI is equipped with a mosaic detector, there are two small gaps in the image which were filled with lower quality data from the Digitized Sky Survey. Can you find them? NGC 5139 is another designation of this cluster.

Starry Night at Paranal

During a night at ESO's Very Large Telescope (VLT), the stars seem to rotate around the southern celestial pole. The skies over Paranal provide splendid observing opportunities for the astronomers below. At the observatory on Cerro Paranal in the dry Atacama Desert of Chile, one of the observatory's four 8.2-metre telescopes can be seen on the right performing its nightly task of looking at the heavens. Two of the four 1.8-metre Auxiliary Telescopes are also seen in the picture. The dry, high environment at 2600 metres above sea level, and the extraordinarily advanced equipment makes observing time at the VLT highly sought after by astronomers around the world.

The ESO Very Large Telescope during observations.

Product ID	mounted_0126
Dimensions	40 cm (W) 40 cm (H) 1 cm (D)

Price

€ 46.99

4 260576 724984

The Long and Winding Road

This splendid picture shows the European Southern Observatory's Very Large Telescope (VLT) on Cerro Paranal in the Chilean Atacama desert.

Product ID	mounted_0127
Dimensions	35 cm (W) 23 cm (H) 1 cm (D)

Price

€ 23.99

4 260576 724991

Monuments of Science

On a remote mountaintop, 2600 metres above sea level in the Chilean Atacama Desert, lies the world's most advanced visible-light observatory.

Product ID	mounted_0128
Dimensions	35 cm (W) 23.30 cm (H) 1 cm (D)

Price

€ 23.99

4 260576 725004

Stellar nursery NGC 3603

NGC 3603 is a starburst region : a cosmic factory where stars form frantically from the nebula's extended clouds of gas and dust.

Product ID	mounted_0129
Dimensions	50 cm (W) 50 cm (H) 1 cm (D)

Price

€ 71.99

4 260576 725011

VST image of the Omega Nebula

The spectacular star-forming region Messier 17, also known as the Omega Nebula or the Swan Nebula, as seen by the VLT Survey Telescope (VST). This vast region of gas, dust and hot young stars lies in the heart of the Milky Way in the constellation of Sagittarius (The Archer). The VST field of view is so large that the entire nebula, including its fainter outer parts, is captured — and retains its superb sharpness across the entire image.

Product ID	mounted_0130
Dimensions	60 cm (W) 60 cm (H) 1 cm (D)

Price

€ 103.99

4 260576 725028

Heart of the Milky Way

Dark dust bands wrap the Milky Way's luminous centre in this image taken by professional photographer Stéphane Guisard.

Celestial Conjunction at Paranal

In the night sky over ESO's Very Large Telescope (VLT) observatory at Paranal, the Moon shines along with two bright companions : already aloft in the heavens and glowing in the centre of the image is Venus, Earth's closest planetary neighbour, and, to its right, the giant, though more distant planet, Jupiter.

Spiral Galaxy NGC 4945

Seen edge-on, observations of NGC 4945 suggest that this hive of stars is a spiral galaxy much like our own Milky Way, with swirling, luminous arms and a bar-shaped centre. Sites of active star formation, known as HII regions, are seen prominently in the image, appearing bright pink.

ALMA and the centre of the Milky Way

This view shows several of the ALMA antennas and the central regions of the Milky Way above. In this wide field view, the zodiacal light is seen upper right and at lower left Mars is seen. Saturn is a bit higher in the sky towards the centre of the image. The image was taken during the ESO Ultra HD (UHD) Expedition.

4 260576 726049

Orion Nebula/HAWK-I

This spectacular image of the Orion Nebula star-formation region was obtained from multiple exposures using the HAWK-I infrared camera on ESO's Very Large Telescope in Chile. This is the deepest view ever of this region and reveals more very faint planetary-mass objects than expected.

Product ID postcard_0058

Price
€ 1.00

IC 2944

To celebrate its 15th anniversary, ESO's Very Large Telescope snapped this intriguing image of a spectacular stellar nursery IC 2944. The fragmented dust clouds in the foreground are being eroded by the UV radiation of the hot young stars.

Product ID postcard_0059

Price
€ 1.00

Carina Nebula Lasers

The Four Laser Guide Star Facility (4LGSF) at ESO's Paranal Observatory shines 22-watt laser beams towards the Carina Nebula. These beams create artificial stars in the upper atmosphere to guide the adaptive optics systems.

Product ID postcard_0062

Price
€ 1.00

Astronomical Images Set

This set of six stunning postcards showcases astronomical images taken by ESO facilities. It includes the spectacular Orion Nebula, the fragmented dust clouds in IC 2944, and the laser guide stars of ESO's Paranal Observatory shining towards the Carina Nebula.

Product ID	postcard_0063
Price	€ 5.00
	

Blackhole 3D Postcard

This 3D postcard depicts a rapidly spinning super-massive black hole surrounded by an accretion disc. This thin disc of rotating material consists of the leftovers of a Sun-like star which was ripped apart by the tidal forces of the black hole. Shocks in the colliding debris as well as heat generated in accretion led to a burst of light, resembling a supernova explosion.

Posters

ALMA's World at Night

This view of the Chajnantor plateau shows the antennas of the Atacama Large Millimeter/submillimeter Array (ALMA) ranged across the unearthly landscape. Some familiar celestial objects can be seen in the night sky behind them. These crystal-clear night skies explain why Chile is the home of not only ALMA, but also several other astronomical observatories.

ESO's VLT reveals the Carina Nebula's Hidden Secrets

This broad panorama of the Carina Nebula, a region of massive star formation in the southern skies, was taken in infrared light using the HAWK-I camera on ESO's Very Large Telescope. Many previously hidden features, scattered across a spectacular celestial landscape of gas, dust and young stars, have emerged.

Price
€ 5.00

VISTA's infrared view of the Orion Nebula

This wide-field view of the Orion Nebula (Messier 42), lying about 1350 light-years from Earth, was taken with the VISTA infrared survey telescope at ESO's Paranal Observatory in Chile. The new telescope's huge field of view allows the whole nebula and its surroundings to be imaged in a single picture and its infrared vision also means that it can peer deep into the normally hidden dusty regions and reveal the curious antics of the very active young stars buried there.

VISTA Looks at the Helix Nebula

ESO's Visible and Infrared Survey Telescope for Astronomy (VISTA) has captured this unusual view of the Helix Nebula (NGC 7293), a planetary nebula located 700 light-years away. The coloured picture was created from images taken through Y, J and K infrared filters. While bringing to light a rich background of stars and galaxies, the telescope's infrared vision also reveals strands of cold nebular gas that are mostly obscured in visible images of the Helix.

4 260576 726278

Spiral Galaxy NGC 1232

This spectacular image of the large spiral galaxy NGC 1232 is based on three exposures in ultra-violet, blue and red light, respectively. The colours of the different regions are well visible : the central areas contain older stars of reddish colour, while the spiral arms are populated by young, blue stars and many star-forming regions.

VLT's Laser
and the Magellanic Clouds

This spectacular image shows Yepun, the fourth 8.2-metre Unit Telescope of ESO's Very Large Telescope (VLT) facility, launching a powerful yellow laser beam into the sky. The beam creates a glowing spot — an artificial star — in the Earth's atmosphere by exciting a layer of sodium atoms at an altitude of 90 km. This Laser Guide Star (LGS) is part of the VLT's adaptive optics system. The light coming back from the artificial star is used as a reference to control the deformable mirrors and remove the effects of atmospheric distortions, producing astronomical images almost as sharp as if the telescope were in space.

Hubbleshop Catalogue

The image is a composite of two astronomical photographs. The background is a deep space scene featuring the Helix Galaxy (NGC 75) in the upper left, characterized by its greenish-blue, filamentary structure. The foreground is dominated by the Ring Galaxy (NGC 1307), which appears as a large, glowing blue sphere with a bright, multi-colored core. The text 'Hubbleshop Catalogue' is centered in a white, sans-serif font.

Hubble Das Universum im Visier

Hubble — Das Universum im Visier (original title: "The Universe Through the Eyes of Hubble") was designed with large images and distraction-free layouts to increase the impact of Hubble's imagery. This book gives the reader a guided tour of the cosmos through the eyes of the Hubble Space Telescope. Before Hubble was launched in 1990, no exoplanet had ever been observed, dark energy was unknown, the age of the universe was a mystery, and the most distant objects observed were just halfway back in time to the Big Bang. Hubble has been the centerpiece in a revolution in astronomy, as well as giving the public a visceral connection to the Universe through its stunning images.
