

# ASTRONET Workshop: Tools, best practices and methodologies for Technology Transfer

Enikő Patkós

Risk and Intellectual Property Manager

# The objective of the Workshop

- Innovation tools and networks are essential to enable TT;
- The list of possible tools and networks is long – strategy and available resources define which ones can be used by a given organisation;
- ASTRONET recommends to its network members to look into these possibilities collectively;
- Listen to the big players and small players and learn from their experiences;
  - What are the feasible, efficient and affordable innovation tools and networks;
  - Best practices on how to use these tools and networks;

# Expected outcome of the Workshop

- By learning from the experience of the speakers, reflect on the ASTRONET recommendation:
  - Is there an existing European TT network that could serve the ASTRONET members?
  - What are the expected benefits for the ASTRONET members from using such network?
  - What can a network do if its members individually are not big TT players?
