## Summary Information Sheet

## IO

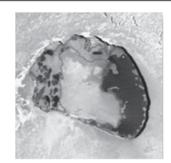

Io is the third largest moon of Jupiter and the innermost of the Galilean satellites. Its surface is covered by deposits from erupting volcanos, lava flows and volcanic vents. They are the result of heat released by tidal forces which squeeze this moon as it moves closer to and further away from Jupiter in its orbit.

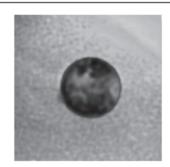

Io Volcano with lava flow: Ra Petera

Io volcanic crater

Eruption

Eruption plume observed by HST

## **Physical Data**

	Property	
	Dist. from central body	
	Orbital period	
	Equatorial radius	
	Mass	
	Density	
Images: ESO, ESA, NASA, except otherwise state		

Io
422,000 km
1,77 days
1820 km
$4,7 \times 10^{15} \mathrm{kg}$
3530 kg/m <sup>3</sup>
1

## For comparison

Moon	
384,000 km	
27 days 8 hrs	
1738 km	
$7.35 \times 10^{22} \text{kg}$	
3340 kg/m <sup>3</sup>	

Mercury
58 million km
59 days
2240 km
$3.30 \times 10^{23}$ kg
5430 kg/m <sup>3</sup>
